### **DETAILED ACTION**

1. This Office Action is the answer to the Amendment filed on November 18, 2009, which paper has been placed of record in the file.
2. Claims **1-12** are pending in this application.

### ***Allowable Subject Matter/Reasons for Allowance***

3. Claims **1, 5, and 9** are allowed over the prior arts cited records.

The closest prior arts are:

1) Jones (5,239,462) discloses a method and apparatus for the real-time automatic determination of the approval status of a potential borrower of a loan includes transmitting by facsimile transmission an image of a form that includes predefined information applicable to the potential borrower coded in spaces at predetermined locations to a control location; automatically receiving the image of the form by facsimile transmission at the control location; automatically scanning and interpreting the image of the form to decode the predefined information applicable to the potential borrower; automatically determining the approval status of the potential borrower according to criteria provided by a lender, including utilizing the predefined information in this determination; and automatically transmitting information regarding the approval status back to the potential borrower. Jones does not disclose the selective forwarding of a received credit application to a plurality of funding sources. Jones discloses a facsimile communication of an exception report to a single lender. Since the system of

Art Unit: 3684

Jones communicates with a single lender, it cannot selectively forward a credit application to a plurality of funding sources.

2) Dykstra (US 5,611,052) discloses an apparatus and method for automatic credit evaluation and loan processing. The user accesses a central processing unit and then selects a desired lending institution and enters the loan application information. The central processing unit then accesses the credit bureau which has been pre-selected by the chosen lending institution and obtains a credit report for the borrower. Next, the central processing unit accesses the credit scoring model which the particular lender has pre-selected. A first stage scoring is then made based on the loan application information. Next, a second stage scoring is made based on the credit report. The two scores are then numerically totalled, and a scoring matrix for the particular lender is accessed. A loan value is assigned to the score, and the score is compared to a cut-off level set by the particular lender. Scores falling below the cut-off level indicate a loan which has been declined. Otherwise, a loan is approved. Dykstra neither teaches nor suggests "selectively forwarding said received credit application to a plurality of funding sources." In fact, Dykstra teaches away from the selective forwarding of an application to a plurality of funding sources, and instead teaches communications with a funding source. Under Dykstra, a merchant "chooses a particular lender," i.e., a single lender.

Therefore, it is clear from the description of Jones and Dykstra, that the prior arts do not considered the possibility of: executable instruction for selectively forwarding said received credit application to a plurality of funding sources and fro receiving a

Art Unit: 3684

funding decision from said plurality of funding sources, **as included in claim 1**;  
selectively forwarding, by a processor, said received credit application to a plurality of  
funding sources; receiving a funding decision and content from said plurality of funding  
sources using a communications interface, **as included in claim 5**; a processor  
configured to selectively forward said received credit application to a plurality of funding  
sources and a communications interface to receive at least one of a funding decision  
and said content from said plurality of funding sources, **as included in claim 9**.

4. Claims (2-4), (6-8) and (10-12) are allowed because they are dependent claims of the allowable independent claims 1, 5 and 9 above, in that order.

### **Conclusion**

5. Claims **1-12** are allowed.
